Net Zero Retrofit Planning

Did you know that in Ontario...

Heating from heat pumps combined with solar power has a lower lifetime cost than natural gas supplied heating!

You can replace your central air conditioner with a heat pump for only an additional \$1,000 and it pays for itself in less than 5 years and reduces the space heating carbon emissions by 55%.

The recently announced carbon taxes will add approximately \$1,000 per year to a house's natural gas bill. That's \$20,000 over the life of a furnace. There are no carbon taxes on solar power!

The federal government has announced funding for a 100% incentivised NRCan energy audit.

We do. See us for;

- Net Zero Retrofit Planning.
- Deep Energy Audits.
- Fuel Transition Studies.
- Carbon footprint studies.
- Reserve Fund Studies.

We provide services for all building types, detached houses to office towers!
